When Spring Comes WELCOME VICTORY *with* GARDEN BEAUTY

VAUGHAN'S FAMOUS RAINBOW GARDEN OF GIANT TULIPS

Vaughan's tulip plantings in the Pacific Northwest are the largest in this country. They insure the preservation of the finest varieties from war's destruction.

30 Flowering Size Bulbs, 6 Each of Five Varieties Separately Bagged and Labeled of these colors: Red, Orange, Yellow, Lavender and Pink. Prepaid, Anywhere in the U. S. A.

OF all the countries now at war, only in America has it been possible to maintain the decorative plantings in our parks and public grounds, and the beauty of private gardens.

National leaders urge that this be continued, so far as possible without hindering the war effort, because it accomplishes two purposes:

It contributes to morale both of civilians and soldiers, by providing an environment of peace and beauty restful to tired minds and bodies.

It preserves garden beauty in a world where for four years war has been destroying it; and will hasten everywhere the return to normal living when peace comes.

THERE are probably fewer tulips in existence in the world today than at any time in a hundred years. Most of these are in America, yet we have only a fraction of what used to be planted in our gardens and greenhouses.

Imports from England are heavily reduced, and American production has been handicapped severely by labor and material difficulties, which are most acute in the Pacific Northwest.

Of the ancient Dutch tulip industry little is known, but rumors state that the few bulbs which

Nazi overlords permitted to be planted last fall, were abandoned this summer when the workers caring for them were deported to Germany.

VAUGHAN'S tulip plantings, largest in this country, have been carefully maintained, and our fine collection of named varieties has been preserved, but expansion has been checked by war conditions and the number of bulbs available for sale this fall is less than last year.

Vaughan's Rainbow Garden of Tulips offers every garden owner an opportunity to insure that when the eventful winter we are facing is over, his garden will again be beautiful.

The 30 bulbs offered for \$2 are all named varieties, and come separately bagged and labeled, so that you may arrange them in an effective color combination. They are all of flowering size, and can be depended upon to produce giant flowers under garden culture. The flowering quality of our American bulbs has been proved beyond all question.

The day of peace seems nearer and the tulips you plant this fall may flower in a happier world, and celebrate a triumphant issue of our ordeal.

AUTUMN is the most favorable time to sow lawn seed, the earlier the better. In the short days and cool nights the seedling plants make vigorous growth. Give them all the time possible to become established before freezing weather arrives.

In the fall it is more important than ever to sow only permanent grasses, free from short-lived, coarse growing types. For a lawn of permanence and beauty, our famous Chicago Parks mixture is recommended, containing only fancy, re-cleaned seed of fine leaved, hardy, lasting grasses of high purity and germination. It contains no timothy, or other coarse adulterants. Remember, cheap mixtures invariably disappoint and increase rather than reduce expense.

We offer Chicago Parks mixture without Clover as "Fairway Mixture" at Chicago Parks prices.

Vaughan's "Private Estate" Bent Formula

For those interested in a deluxe mixture we highly recommend our Private Estate formula. This formula contains over 98% pure seed and is free of all noxious weeds.

In addition to Kentucky Blue Grass of the highest quality, to insure a durable and resistant foundation for your lawn, Private Estate formula includes an important proportion of bent. It produces a heavy turf of very fine texture. This mixture is equal or better in purity to the highest priced mixtures and most important, it contains more bent seed. It is the best value on the market.

Price, 1 lb., 70c; 2 lbs., \$1.40; 3 lbs., \$2.05; 5 lbs., \$3.35; 10 lbs., \$6.50; 15 lbs., \$9.65; 20 lbs., \$12.75; 25 lbs., \$15.75; 100 lbs., \$59.00.

Vaughan's No. 25 Lawn Formula

An economy blend for new seedings and quick results which should be followed by reseeding with a more permanent blend like our "Chicago Parks." In spite of its low price, this blend does not contain timothy. Sow at the rate of 1 lb. to every 200 sq. ft. Begin cutting when grass is 3 to 4 inches high and continue to cut regularly to keep turf fine.

Cottage Tulips

COTTAGE tulips are inclined to have pointed petals, sometimes turned back, and the blossom to be smaller and more slender. But they harmonize perfectly with the Darwins and Breeders and supply a quality of clear, bright color which these lack. They blossom a few days later than the Darwins, often carrying the flowering period of Spring bulbs into the early days of June, especially if planted in a shady position. Light shade also lengthens stems.

Pink and Rose

Dido (26 in.) Superb in form, poised erect on a straight stem, we know of no other tulip that has more fragrance and brilliant coloring than Dido. It is a deep, rich pink with salmon lights, suffused and slightly edged orange. Doz., \$2.00; 100, \$14.00. Second Size, Doz., \$1.65; 100, \$12.00.

Inglescombe Pink (24 in.) Warm pink tinged orange near edges of petals when it first opens. Age makes this tulip more beautiful, as after the first few days it changes to pure pink. Doz., \$2.00; 100, \$14.00. Second Size, Doz., \$1.65; 100, \$12.00.

John Ruskin (18 in.) Salmon-rose, edged lemon-yellow; inside deep rosy lilac, with margin of yellow; large flower of fine shape. Doz., \$2.00; 100, \$14.00. Second Size, Doz., \$1.65; 100, \$12.00.

Maiden's Blush (20 in.) The old English Picotee; snow-white with a margin of rose. The petals are very pointed and reflex beautifully. Doz., \$2.10; 100, \$15.00. Second Size, Doz., \$1.80; 100, \$13.00.

Yellow

Argo (22 in.) While the flower is not large, it stands out amongst all others for its rich color. It is deep golden yellow, slightly penciled toward the top edges with orange, which deepens as the flower ages. Doz., \$2.00; 100, \$14.00. Second Size, Doz., \$1.65; 100, \$12.00.

The long, well-formed flower is of splendid substance, and borne on a strong, stiff stem. Doz., \$2.00; 100, \$14.00. Second Size, Doz., \$1.65; 100, \$12.00.

New Race of Triumph Tulips

NOT since the Darwin race was introduced, has so great an improvement been made in the tulip family, as in the new Triumph class. Here are early tulips—coming at a time when every bit of color in the garden is more precious because there is so little of it—with stems as tall, flowers as large and colors even more brilliant than the Darwins. A hybrid of the Darwin and early singles, the Triumph tulips have a distinctive beauty of their own, and a clear luminous color quality which will make you treasure them. Two full weeks are added to the tall tulip season by planting these.

TULIP KEIZERSKROON

Striped

Keizerskroon 10b. This variety has been familiar from childhood. It is one of the oldest, as it is, assuredly, one of the best of early Dutch varieties. The huge flower is bright red, nearly scarlet, edged with yellow; it is self-confident, the margin is broad and clearly defined, the flower is seen and recognized from afar. It remains a distinctive flower, a great bedding tulip, and one quite good for forcing. It is a strong, healthy grower, and a bed of it will bring into the early spring garden some of the color and joy for which we have longed for so many months. Doz., \$2.10; 100, \$15.00.

Vaughan's Special MIXTURE Single Early Tulips

Species Tulips

For the Rock Garden and Hardy Plant Border

The general characteristics of the various species, all of which are natives of Asia Minor and Central Asia, are bright colors and recurved petals. These Tulips do not always feel happy in their new surroundings and after two, or possibly three, seasons they will disappear. With care and the provision of suitable quarters they will flower quite satisfactorily. They feel best contented in rock gardens and borders.

Australis (Celsiana) Yellow, tinged outside of petals reddish bronze, a pretty species somewhat resembling T. Sylvestris, is found growing in Spain and Southern Europe. Height 16 inches. Flowering in April. Doz., \$1.80; 100, \$13.00.

★Kaufmanniana (The Water Lily Tulip). Large, creamy flower, brilliantly marked with carmine, yellow center. Flower opens flat and is carried on a stem usually 6 inches in height. Blooms early in April. The bulbs should be planted six inches deep. Splendid for naturalizing in shady places; self-sows freely. One of the first to flower. Height 5 to 7 inches. Doz., \$2.00; 100, \$14.00.

Miniature Daffodils

The following are charming little subjects for rock work, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and if happy will soon establish themselves and afford a lovely picture in early spring. All the Bulbocodium like moisture, and should therefore be planted at the foot of the rockery. When in bud water freely.

1,000 Bulbs, \$75.00, Prepaid.

DAFFODILS are the first major flowers to bloom in the spring. By nature they are informal flowers, and look best when grown in drifts, in the shrubbery or under trees. They like to nestle among the roots of shrubs, and as they bloom before the leaves develop, they thrive in places which later in the season are well shaded. Our naturalizing mixture is an exceptional value, containing many of the best named Trumpet, Leedsii, Star and Poeticus varieties. Plant them and do not disturb until they crowd; the bulbs may then be lifted and replanted over a much larger area. A purchase of bulbs is an investment which will pay in bloom for a lifetime.

25 Daffodils for \$2.00. Smaller bulbs but of flowering size, packed in a special decorated bag with cultural instructions. Prepaid.

THE extensive daffodil production which has been built up in this country during the last fourteen years provides a plentiful supply of first quality bulbs, including most of the finest new varieties.

We offer a complete list of standard varieties, and novelties, all grown in the Pacific Northwest, where experience has proved the highest quality bulbs are produced.

Where to Plant Them

Daffodils are particularly fine subjects to plant under the edge of bushes or among perennials in the hardy border as they seem to like to nestle among the roots of their neighbors. A clump of golden trumpets peeping from beneath the overhanging branches of Spiraea Van Houttei or nestling in a sheltered angle of a building are one of the glad sights of early spring.

A few bulbs can be tucked into odd corners all about the garden and they will repay mightily when the first sunny days of spring bring their sturdy shoots breaking through the earth.

Daffodils and narcissi need not be moved for several years if they are flourishing, in fact not until the clump becomes so large that it is evident it needs to be divided and they should be replanted at once.

The Hardy Lilies

LILIES are so beautiful, so fragrant, we are likely to think them too fine for the amateur to grow. But many are hardy, thrifty flowers, capable of surviving conditions which would overcome flowers much less beautiful. Grow them in the border in small groups, with background, where their beauty has a suitable setting for its display. They blossom, as a rule, in midsummer, when fine flowers are at a premium.

Outdoor Culture—When planting lilies out-of-doors, see that they have a well drained position, and where they will be shaded from very hot sun. Such places can usually be found around the shrub borders, and in the hardy plant border. Never mix manure in the soil around lilies, but enrich with a standard commercial plant food or with bone meal. Many varieties are termed "stemrooters," that is, they develop roots on the stem up to two or three inches from the ground. These roots are voracious feeders, and on them depend greatly the number and size of flowers. When they appear, the plant should receive a top-dressing of good rich soil on which they can feed freely. Spade over the ground thoroughly to a depth of 18 inches before planting lilies. Plant the bulbs 4 to 6 inches deep, depending on their size and the soil, deeper in light soil. Put some sand under and around the bulbs, and after covering protect with six or eight inches of leaves or other litter, which must be removed in late spring.

Indoor Culture—Lilies should be potted immediately upon receipt, if intended for growing in pots or for forcing. In potting use a compost of fibrous loam and sweet decomposed leaf soil, with plenty of coarse sand or a mixture of good peat, loam, and sand, adding to the compost a few pieces of charcoal. See that the pot is well drained. The bulb should be set about half-way down in the pot and barely covered with soil, thus leaving room to top-dress and fill the pot with more soil when stem-roots appear above the bulb. After potting, give a thorough watering and set outside in a cold frame or shady situation, then cover with ashes or long straw. After they have stood from three weeks to a month and thoroughly rooted, bring inside, in a temperature of about 60°; let the plants grow slowly under a bench or some other suitable place until about 6 inches high; then place on top of the bench in full light. An occasional application of liquid cow manure, starting about six weeks before flowering time, will stimulate the plant wonderfully. **Thorough rooting is essential.**

Lilium Canadense (Meadow Lily)

The whole plant has a downward, graceful movement and looks like a slender, tiered green belfry ringing golden bells. The flowers are nodding, bell-shaped, with petals flaring out and turning back slightly. They are heavily dotted on the inside with purplish brown dots. Blooms the end of June to July. Should be planted five inches deep. It is an excellent Lily for naturalizing. Height, 3 to 5 ft.

Hardy Bulbous Iris You Can Grow in the Garden

ADMIRERS of the iris will find this a group to be valuable additions to their collections. Flowering in late June and early July, they follow the bearded and Siberian irises, prolonging the display and producing flowers of a distinct type and quality of coloring. The colors are clear and brilliant, and the petals are delicate, but of excellent substance. They make quality cut flowers, lasting fully a week in water.

The Dutch iris have displaced the Spanish iris, from which they were developed. Both they and the English iris are successfully grown in localities which have sub-zero temperatures in the winter. In the cold winter states they should have the protection of a heavy mulch, applied after the ground has frozen and should be planted in a location where spring growth is not unduly stimulated, so they will not get a premature start, and suffer injury from belated frosts.

Bulbs should be dug each year after foliage has turned brown. They should be cured quickly in a dry location, and only the largest bulbs should be replanted for flowering. The smaller bulbs can be grown in a nursery row until they reach flowering size. The increase is rapid and bulbs which are not lifted will crowd and stop flowering.

IRIS TINGITANA WEDGEWOOD

For indoor use and protected plantings. A seedling of the old favorite Tingitana that is just as early, but a much more reliable bloomer. The small cultivator will do better to plant his bulbs, six or eight according to size, in a seven- or eight-inch pot, rather than in ordinary shallow boxes. They must be kept cool, 45 degrees or so, until the buds are out of the neck. A great cut flower. Light blue incolor. 8-9 ctm. for outdoor planting. Doz., 65c; 100, \$4.50; 1,000, \$40.00. 10 ctm. up for indoor growing, doz., \$1.50; 100, \$10.00; 1,000, \$90.00.

DUTCH IRIS

ENGLISH IRIS

These magnificent bulbous Irises thrive in any ordinary garden soil but prefer a good loam. The earlier the planting, after beginning of September, the greater the success; the bulbs should be planted 4 inches deep. They flower from end of June to beginning of July thus succeeding the Bearded Flag Irises, Early Xiphium and Spanish Irises. As cut flowers they take a first place.

IRIS RETICULATA

Fragrant Iris—Hardy with Protection

RETICULATA. This lovely species is one of the treasures of the garden or rock garden. It can best be described as a small form of the Spanish or Dutch Iris. Its main value lies in the fact that it may be forced into bloom in the house with the greatest ease. Six or eight bulbs put into a 4 or 5-inch pot when received will bloom about Christmas time. The fragrant blossoms remind one of a bunch of fresh violets. Perfectly hardy with reasonable protection. It is one of the loveliest early flowering bulbs for the rockery. GRAPE HYACINTHS (Muscari)

Muscari, or Grape Hyacinths, are a race of spring-flowering bulbous plants which thrive in American gardens. They are not showy when only a few are seen together, but a drift of them presents a picture of beauty, especially if planted with late tulips, for which purpose they are well adapted. The species also look charming in clumps in the rock garden or border, and the Feather Hyacinth (*M. plummosum*), in particular, may be employed, with great gain, in pots in the cold greenhouse. In fact, pot culture gives this Grape Hyacinth such delicate and uncommon coloring, that it might well be grown anywhere under glass. All are very accommodating in their requirements, but prefer a good loam with a little old manure dug into it, and, in the case of the Feather Hyacinth alluded to, a rather warmer position. The bulbs should be planted during autumn at a depth of about three inches and about two inches apart.

The colors run in delicate tints of white, pink, cream, bright yellow and rose. They are hardy in the coldest States, and while they are at their best in a loose, gritty soil, rich in leaf mold, they also thrive in woodlands, in shaded corners, or in the crevices of rockwork in shade.

Americanum. It produces in April, small, lily-like flowers, which vary through white, pink, bright yellow, rose, and cream. Bulbs should be planted about 5 inches deep. Doz., 75c; 100, \$5.00; 1,000, \$45.00.

IXIA-CORN LILIES

- 3 Yellow Paper Whites (Grand Soleil D'Or) mammoth bulbs.
- 2 Chinese Sacred Lilies, mammoth bulbs.
- 6 Oxalis Grand Duchess Mixed.
- 1 Calla Lily White bulb, first size.

Most of you know how easy it is to force into flower the beautiful, fragrant, Paper White Narcissus, in bowls of water. By using Vaughan's prepared bulb fibre in place of pebbles, the variety of bulbs that can be forced is widely increased.

METHOD OF FORCING BULBS IN FIBRE. Moisten Vaughan's Prepared Bulb Fibre to saturation, fill the bowl with wet fibre, and plant the bulbs allowing their necks to emerge from the fibre, but without pressing the fibre too firmly around them. Place the bowl in a cool, airy place where the light is dim or dark, and preferably the temperature does not rise above 55 degrees. Keep the fibre moist, since if it dries out the flower buds may go blind. But water sparingly until good roots have formed. When strong top growth has been made in the dark, take the bowl to a sunny window, where it will have fresh air, all the sunlight possible especially in the morning, and preferably a temperature not less than 55 nor more than 70 degrees.

Complete Directions for Planting and Forcing All These Subjects Are Included.

Vaughan's Champion Amaryllis

THIS is the strain of giant flowered amaryllis which won the championship at the last National Flower Show. It is rich in brilliant red, and lovely white flowers, with many in which the white ground is vividly marked with contrasting tones of red, pink and salmon. In size, this strain has never been surpassed.

Of all bulbs which the amateur can grow successfully indoors, the Amaryllis is the largest, most beautiful, surest to flower and most easily handled. Our new hybrids, especially, are so gorgeous in size and coloring as to amaze those not familiar with them. From a single stem, spring from one to three lily-like flowers, six to eight inches in diameter.

Place only one bulb in each pot, covering it as far as the neck or upper narrow part. Water sparingly at first until the flower shoots begin to appear. Some growers keep them in the dark until the flower stems are four or five inches long, and then bring to light.

After flowering they should be placed in a warm window, or set outside in sand or cinders and watered every day (sometimes twice a day), until the end of August when water should be gradually withheld and the bulbs allowed to go to rest. In the fall they can be forced again as with new bulbs.

Vaughan's New Hybrids. Largest flowers and most brilliant colors. Bulbs are two-inch and up in diameter. We can supply in separate colors in the following shades: Each, 75c; doz., \$7.50.

Dark Red **Pink Shades**
Red Shades **White Shades**
Salmon

Mixed. Flowers are immense, in an amazing range of color blends, splashed and striped in a manner not seen in other strains.

DAFFODIL KING ALFRED

Forcing Daffodils

DAFFODILS are excellent subjects for indoor growing in bulb pans in soil or fibre. These require more skill in growing than do Paper White Narcissi. Success depends on the extent to which fine roots are developed before the pots are brought to the light. These

roots develop best when the pots are about fifteen degrees above freezing. A pit in the garden which is protected from surface water, so it will not fill, is an excellent place to store the bulbs. The pots may be covered with leaves, straw, or even with ashes or sand; and brought in after eight weeks, when it is desired to begin forcing them. Figure on not less than five months before flowers are produced. After being brought into the house, a temperature of 60 degrees is sufficient until the formation of buds begins, and the best flowers will then be formed in a temperature of 68 degrees. All the light possible should be given after top growth begins. King Alfred is easiest to grow.

THRYSOIDES FLORA PLENA. The flower has the keeping quality of the single and the appearance of a double Tuberose, with no strong odor. Three for 45c; doz., \$1.35; 100, \$9.00.

ARABICUM. Throws up a tall stem with a cluster of star-shaped flowers; pure white with dark centers. Excellent for cutting, lasting a long time in water. These bulb flowers are very hardy in the South and other mild climates, but they should be given protection when planted outdoors in the North. UMBELLATUM. This is the small white hardy variety that is seen in great profusion and around many of the old gardens. It propagates readily and adapts itself splendidly to naturalizing. It does well over a wide temperature range and blooms profusely each season with little or no care. Each, 10c; doz. \$1.00; 100, \$7.00.

Giant Freesias

These fragrant flowers are easily forced in pots, pans or window boxes; and they make delightful decorations on the table or in the sunparlor. They should be potted in September and stood outside until the approach of frost, then taken inside to the conservatory or a sunny, airy window where they will flower freely from January onwards. Grow cool.

Seeds for Your Victory Garden

After the final crops in your Victory garden have been harvested, but before the ground has frozen, the soil may be prepared and some crops sown for next spring.

Perennial crops may be planted, such as Egyptian or red perennial onions, which grow from "top sets" produced by the plants, which make no seed; and rhubarb roots. These are available early and may be set out whenever ground is ready for them.

Leaf lettuce and spinach may be sown this fall, even in areas where

the ground freezes hard, and they will make a crop much earlier than from spring sown seed. Sow it as nearly as you can judge just before the ground freezes, and cover deeper than in the spring. After the ground freezes mulch the bed to keep the frost in. Remove the mulch when the ground thaws out in the spring.

For those who wish to order seed for their Victory gardens this fall we list on this page varieties which we have on hand and can deliver promptly.

Hardy Perennial Plants for Fall Planting

These are full-sized plants; not the small plants often advertised at bargain prices.

HARDY perennials may be set out this fall in time to become well established before winter sets in; and next year will see them better developed, and bearing finer flowers than can be obtained from plants set in your border next spring.

This advantage is accompanied with very little extra risk. We do not list the kinds which need special protection through the winter. It is always well to apply a light mulch of straw or excelsior over newly planted perennials, after the ground has frozen. This will tend to prevent winter thaws and frost heaving. Plants should never be planted where water stands or where there is poor drainage.

Irises are most effective if planted 3 of a kind in a clump.

★Those indicated by a star are medium priced varieties of outstanding merit and are especially recommended for garden planting.

DYKES MEMORIAL MEDAL. This is an award made annually in America, France and England for the best Iris of the year.

As soon as German iris plants are received, plant them in a sunny, well drained place. Each plant should have at least eighteen inches clear space from other irises, as it will grow in a circle and many varieties spread rapidly. The rhizome, or fleshy root stock from which the leaves and roots grow, should be barely covered with soil, with the roots properly spread below, and the soil well firmed about them. Until the plant is established, give it frequent attention, watering in dry spells. In the first winter, after the ground has frozen, a light mulch to prevent thawing and heaving will be beneficial.

SIBERIAN IRIS

Vaughan's Peonies

THERESE

PEAONIES, especially the modern introductions, are probably the most valuable, and most beloved of all perennial plants. Planted in sun or semi-shade in single clumps or long beds; or bordering lawns, shrub rows, and drives, they give a grand display of large fragrant blossoms of brilliant colors during June, followed by their exquisite foliage which is very ornamental during summer months. They are also most effective for home and table decorations, and last longer in water than many other perennials. Avoid buying cheap Peonies; they require just as much care as the better kinds, and are disappointing in the end.

Planting. Peonies may be planted from September first until May. Orders should be sent in at once so that we can forward when weather permits. Avoid planting too deeply, as this is often the cause of shy blooming, 2 or 3 inches of soil over the crown (eyes) being sufficient. We offer **Divided roots**, natural divisions, having 3 to 5 eyes of blooming size.

The figures following the varieties are the latest ratings given to them by the American Peony Society, based on a scale giving 10 points for perfection.

Feeding. Peonies in established plantings need to be fed each Spring. A top dressing of a balanced plant food, well worked in will do wonders, but it should be applied early.

Roots by Parcel Post.—If to be sent by parcel post, add postage as follows: Single roots, 8c; two roots, 12c; 3 roots, 16c.

★Varieties indicated by star are of outstanding merit and are especially recommended by us for garden planting.

We list on this page plants which have been found useful for planting in hedge rows. Annual Flower Seeds for Fall Sowing

WHEN you sow seeds of annuals in Fall, you imitate Nature's method. Practically all hardy annuals will produce stronger, sturdier plants with earlier bloom by this method. Even when spring sowing is desirable, experienced gardeners also sow in fall because they then have a continuous season of bloom. Also, they can sow at their leisure instead of trying to plant everything in a few short weeks. Do not be in too much of a hurry to sow.

The ideal time is just before the ground

freezes for the winter. November 15th is early enough in normal seasons in the vicinity of Chicago and New York. If the ground has been prepared in advance, sowings can also be made during winter thaws.

A fine seed bed is desirable. No covering of any kind is needed unless there is danger of washing or from birds, in which case a light, loose covering of evergreen boughs can be used. Plant at half the depth used when sowing seed in spring. Broadcast all small seed.

Varieties preceded by star are especially recommended for sowing in the fall above your bulbs. They will grow in the spring and blossom after the bulbs have gone. Their shallow roots will not interfere with the bulbs maturing properly; their growth will conceal the bulb foliage after it grows yellow and unsightly.

Pansies and Violas must be sown early in September, but should then be protected with straw or glass sash during the winter.

HELPFUL DETAILS MAKING MAIL ORDERS CONVENIENT

Order at Once Send in your order as soon as possible after receiving catalog. Bulbs for immediate planting will be sent at once, others at proper time, with due notification.

How to Order Use the order sheet accompanying this catalog. One section is for seeds, bulbs and sundries (i. e. Insecticides, Manures, etc.); the other for plants, shrubs and trees only.

Don't put plants and trees on the same section with bulbs and seeds.

Important Write your name, postoffice, state and express office plainly with black ink, on every order, and every time you write to us give plain express, mail or freight directions; where none is given, we route at buyers' risk.

Quantity, Size, Price Always give the quantity required of bulbs, plants or trees, mentioning size where different sizes are offered, and carry out the price of each item.

Mistakes These will happen in spite of all care. When one is discovered write us at once, enclosing your original order, if it has been returned to you. Prompt correction will be made. Please do not return goods until you hear from us.

Parcel Post Fourth Class Mail Matter, which includes seeds, plants, bulbs, roots, books, tools, insecticides (in dry and paste form), odorless fertilizers and requisites, may be forwarded by domestic parcel post within the United States. See table opposite showing postage you should add to insure free delivery. All poisonous Insecticides, are unmailable.

Express Service For most orders exceeding 20 pounds in weight and for plants requiring special packing, we urge they be expressed. Mark order plainly if wanted by Express or Parcel Post

Our Terms with customers not having an account are strictly cash with order. Because the post office fee for collection on a C. O. D. order which the customer must pay, is out of proportion on small orders, we must decline to accept any C. O. D. order for less than \$2.00. We make no C. O. D. shipments unless one-third of amount is paid in cash with order. No trees, plants or other perishable stock, are sent C. O. D.

How to Send Money Send by New York or Chicago draft, registered letters, or postoffice or express money order; both are cheap and absolutely safe. Small postage stamps are taken as cash, but we prefer larger denominations, such as fives, tens or fifteens. Registered letters can be sent from any postoffice, and your receipt sent you by return mail if demanded. If personal checks are used have them certified and add 15 cents for exchange cost. Put no currency in letter unless you register it. Make money order payable to "Vaughan's Seed Store."

PARCEL POST Vaughan's Seed Store at Chicago and New York, covers the United States in a remarkable way to secure cheap postal rates for its many mail order customers.

The weights of all bulbs and roots offered are given and customers are requested to add sufficient to their remittance to cover postage on total estimated weight of order at rates given in the following table, except on pre-paid offers.

Our Responsibility It is so manifestly impossible for a seller of any perishable article to be responsible for what may happen to it after it leaves his hands, especially one like seeds, which are planted in the ground under varying conditions of soil and climate, that we, in common with all American seed houses, disclaim responsibility as to the crop which may be raised from seeds which we sell.

At the same time, in case of any failure to secure proper results caused from some inherent fault in the seeds themselves, Vaughan's Seed Store accepts responsibility, not for crop, but to the extent of the amount of money paid for the seeds, if immediately advised. Or seeds may be returned.

VAUGHAN'S SEED STORE, Inc., gives no warranty, express or implied, as to description, quality, productiveness or any other matter of any seeds, bulbs or plants it sells, and will not be responsible for the crop; and it gives no warranty express or implied, as to fertilizers, other than in respect to analyses or other data expressly and lawfully required of the seller by statutes.

Bulbs for Continuous Flowering

To Introduce to You the Variety, Beauty and Easy Culture of Spring Flowering Bulbs, We Offer these Bargain Combinations, Planned to Give Continuous Bloom.

come in June, when gardens are crowded with glory, no gardener would be without.

The purchase of spring-flowering bulbs should not be considered an expense, to be charged to one garden season. It is an investment. A stock of bulbs has been known to produce flowers in the same garden for a century.

Even the labor of lifting bulbs after flowering may be dispensed with. All do excellently when left undisturbed year after year. This practice, indeed, is recommended for the daffodils. And tulips will suffer small loss if allowed to remain in a bed where they have done well, year after year. For this, plant them deeper, 8-inches in clay, 10-inches in sandy soil.

HOW TO PLANT BULBS

Plant all fall bulbs as soon as they can be obtained, and you are willing to disturb established beds. Daffodils and hyacinths benefit especially from early planting. Tulips should go in when the leaves of trees fall, so they have a season of growth before the ground freezes.

In case of necessary delay, all fall bulbs can be planted as late as the ground can be worked. A light mulch placed over the proposed plant-

ing spot will keep the frost out, if delay is unavoidable. A mulch over late planted bulbs placed after the ground is frozen, will prevent thawing and heaving.

A complete plant food applied to the soil at the rate of 5 pounds to 100 square feet, raked into the top soil after planting, will benefit the bulbs.

We will ship the following, prepaid. 6 Scillas, 6 Grape Hyacinths, 6 Giant Tulips, 6 Hardy Daffodils, 6 Spring Snowflakes, 6 Liliun Tenuifolium—36 bulbs.

72 Bulbs, 12 Each of 6 Different Varieties, \$5.25 prepaid

12 Scillas, 12 Grape Hyacinths, 12 Giant Tulips, 12 Hardy Daffodils, 12 Spring Snowflakes, 12 Liliun Tenuifolium—72 bulbs.

156 Bulbs, 24 Each of 6 Different Varieties, 12 of a seventh variety, \$11 prepaid

24 Scillas, 24 Grape Hyacinths, 24 Giant Tulips, 24 Hardy Daffodils, 24 Spring Snowflakes, 24 Liliun Tenuifolium, 12 Ornithogalum Umbellatum—156 bulbs.

Use no manure with bulbs, unless it has been thoroughly rotted and can be spaded into the ground several months previous to planting.

If planting with a dibber, take care that the bulb rests on the soil and is not "hung"—that is, left with a hole beneath it caused by the point of the dibber.

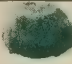

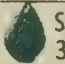

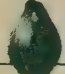

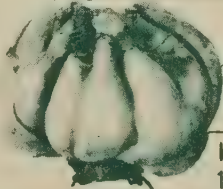

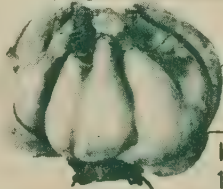

THE ADVANCED gardener knows that bulbs supply the dominant flowers for the first two months of the garden season, the time when garden beauty is most precious, and most rare.

The beginner finds that bulbs give him the surest and easiest success, of any flowers. Provided he plants quality bulbs, and follows a few simple rules, he can hardly fail to pro-

ALL classes of roses benefit by fall planting when properly done, as it enables the plant to start growing earlier in the spring.

Planting Method: Select three or four sturdy stems and cut clean away all others, prune the selected stems back to four or five eyes. Set the plant deeply, so that the crown where the stems unite is covered and the stems rise out of the soil. When frosts begin hill soil six or seven inches high around each plant, and cover the ground about them with several inches of dry leaves, or strawy manure. In the spring, dead wood should be cut away and each stem cut back to three eyes.

Even before France fell and while her finest perfumes were still available, we invited direct comparison with these, regardless of price.

Today, imported perfumes are no more. Vaughan's fine floral perfumes are still available, can still be compared with the finest, regardless of price.

While unusual demand has exhausted stocks of some odors, we have been fortunate in replacing most of these from small lots of fine essential oils imported before war destroyed contact with Europe's great producing centers.

If you can no longer find your favorite imported odor, you will find the following blends of the same individual character as the best Parisian bouquets: Bouquet S, Bouquet X, Hawaiian Lei, Zanzibar, Calcutta, Victoria Regina and Song of the Heart.

THE FOLLOWING ODORS ARE AVAILABLE IN EITHER COLOGNE OR PERFUME

(Cologne is about one-eighth the strength of perfumes (about double the strength of ordinary toilet water). It is used wherever a perfumed lotion is wanted—in the bath, on linens, or as a refreshing lotion.

Appleblossom: Soft, yet fresh and clean.

Bouquet S: A delicately feminine blend rich floral oils that in France and America is accepted as the leading type of odor in the better shops.

Bouquet X: Another blend, slightly "drier" and less sweet. An exotic fragrance preferred by women accustomed to the better French perfumes.

Carnation: Many acknowledge it as the best recreation of this beloved old favorite.

Forest Breeze: A smoky, piney fragrance—the scent of a pine forest on an autumn day.

Freesia: We are proud to have captured the elusive scent of this delicate flower.

Gardenia: Not sweet like so many "Gardenia" perfumes—a rich, intense odor.

Vaughan's Sampler: To prove to our customers the high quality of our perfumes, we have assembled a "Sampler" collection, featuring our ten leading fragrances, a full one-eighth dram of each, enough for several applications. All ten fragrances, \$1.00 postpaid.

Geranium: Like a crushed leaf of the green plant.

Hawaiian Lei: A lovely blend of exotic tropical flowers.

Heather: A rich "smoky" or "peaty" fragrance that goes well with sport clothes.

Hyacinth: The most accurate recreation of this flower we know.

Lavender: The well-known English type, not sweet or "musky" like so many near-lavenders.

Lilac: Lilacs wet with morning dew. Fresh and leafy—our largest selling odor.

"Personalized Perfumes"

Dram, \$1.50; Ounce, \$10.00

We take pleasure in offering this group of highly individual, specially blended odors, which while not exactly matching the perfume of particular flowers, do express the enchanting fragrance of gardens and woodlands.

Calcutta: The oil from which this perfume was made was intended originally for introduction at \$75.00 an ounce by a famous French house. Escaping the fall of Paris, the perfumer brought this oil to America as his only remaining asset. We contracted for the entire stock. This is perhaps the last great perfume that will come from Paris until Germany falls.

The fragrance is that of the rich, opulent bouquets for which the French are famous, yet it is so dry and woody that it is not cloying. Outstanding.

Victoria Regina: Based on the formula for the consecrated oil used in anointing Queen Victoria at her coronation. Rich and fragrant. Not for the ingenué.

Song of the Heart: A dry, woody fragrance with no trace of sweetness, yet definitely not heavy. A perfume of unusual distinction.

Flowers for Home Cheer — Easily Grown —

Chinese Sacred Lily (Narcissus)

THIS narcissus is called by the Chinese the "Joss Flower" or "Flower of the Gods," and "Water Fairy Flower." It is highly prized for the abundance of its flowers and its marvelously rapid growth. The flowers are white, with yellow cup, and very fragrant. Each bulb produces several flower-spikes. In China the bulbs are grown in the living rooms in fancy bowls filled simply with pebbles and water. Place in a sunny window by day and on a table near the center of the room by night, as frost destroys the flower buds. Care should be taken that it is not placed in a draft, as this may cause non-flowering. Recommended for Christmas flowering.
Large Bulbs, three for 40c; per dozen, \$1.35; 100, \$9.00.

With flowers of your own growing, your home can be beautified this winter in spite of the high prices and scarcity of cut flowers and plants. Attractive stands, wall brackets, and glazed pots, are available to provide an attractive setting for your flowers in sun-parlor or living room.

With new methods of forcing bulbs which banish all dirt, it is a simple matter to keep the sun-parlor or living room constantly supplied with blossoms at amazingly low cost. See Indoor Bulb Pages for cultural directions and for subjects illustrated on this page and others.
